

Call reference number	(Track-MSCA-DN-2)
Call name	Pre-doctoral position EU Doctoral Network Track-the-Twin: neutron scattering
Application Deadline	2024/08/31

Introduction and main description
<p>BCMaterials, Basque Center on Materials, Applications and Nanostructures, Leioa, Spain (www.bcmaterials.net), is an autonomous research center, belonging to Ikerbasque, the Basque Foundation for Science and the University of the Basque Country (UPV/EHU).</p> <p>We seek a pre-doctoral student in Condensed Matter Physics within the Horizon Europe MSCA Doctoral Network <i>Track The Twin</i> project. We offer a full-time position as a doctoral fellow for three years.</p> <p>Quantum dots (QDs) exemplify the successful transfer of innovative nanomaterials from a lab-scale invention to a technology that offers better and more power-efficient electronic devices, or makes buildings generate renewable energy. Such implementations, however, keep QDs under permanent loading, such as constant illumination, elevated temperature or exposure to environmental agents. Efforts to make QDs resilient against loading induced ageing and loss of performance are time-consuming and costly.</p> <p>The EU Doctoral Network <i>Track The Twin</i> addresses this problem through a research and training program aimed at creating and using QD digital twins (QDDTs). Focused on the case of QDs under illumination, this goal creates an exceptionally rich environment for research training of doctoral candidates (DCs) in nanomaterials. Research topics range from the latest methods of synthesis, structure analysis and time-resolved spectroscopy – from infrared to x-ray – to computational materials science. DCs will join forces to reach the common goal of demonstrating loading-resilient QDs synthesized according to best QD structures as predicted by the QDDTs.</p> <p>To facilitate such a collaborative endeavour, all DCs will be trained to use and co-develop a common data platform and they will be permanently exposed to the diversity of environments needed to implement together a QDDT. Moreover, thanks to the deep collaboration between world-leading academic beneficiaries and start-up companies in nanomaterials and computational chemistry, scientific training is complemented by extensive transferrable skills training.</p>

Skills and Requirements
<p>The candidate must have a PhD in Materials Science, Physics, Chemistry or related areas. A background in condensed matter physics is desirable but not compulsory. Knowledge in advanced structural characterization techniques, in particular scattering-type ones, is also desirable.</p> <p>Proficiency in speaking and writing in English.</p> <p>Self-motivated and ability to work in a team and willing to coordinate the research in a particular topic.</p> <p>A high level of motivation and independent thinking abilities.</p>

Skills and Requirements

Ability and eagerness to learn new skills outside his/her own discipline.
Presentation skills and being able to meet the deadline are also required.

Work Program / Duties / Responsibilities

The Pre-doctoral candidate's primary focus will be to use neutron-scattering based techniques to study the structure of Quantum Dots, paying particular attention to resolve the core/shell structure and ageing-related structural changes of QDs.

The Predoc will be incorporated at the Neutron Science transverse research line of BCMaterials, under the supervision of Jose Maria Porro, Ikerbasque Research Fellow.

The candidate will be in close contact with several renown international groups in the field of QDs, in Europe and the rest of the world.

Application Procedure

Only applications entered through EURAXXES will be considered.

For full details, please visit: <https://euraxess.ec.europa.eu/jobs/251120>

Other Relevant Information

After a first assessment of the quality of the CV and the motivation letter, best-ranked candidates will be invited for an interview during September 2024. The final selection will be based on the CV, the motivation letter and the interview.

Contracts will start on December 1st, 2024 at the earliest.

We do not accept late applications.
